Causal-wave transport equation and five measured coefficients

$$\frac{\mathrm{d}C}{\mathrm{d}\tau} = D(\Omega)\,\Delta C - \gamma C + \alpha_\xi C + \beta_\pi \Pi_{\mathrm{common}} C + \varepsilon_{\mathrm{sync}}^2 C$$

$D(\Omega)$	$-\gamma C$	$\alpha_\xi C$	$\beta_\pi \Pi_{\mathrm{common}} C$	$\varepsilon_{\mathrm{sync}}^2 C$
diffusion / curvatur	damping / time arrow	Xi reaction rate	common phase	sync persistence
0.83996	$\gamma = 0.10021$	0.90082	$\beta_\pi = 0.93791$	0.05000

Five measured coefficients; not fitted to downstream observables
